

Dimmer-TO-Relay module

TDS10116

The dimmer-to-relay module transforms 16 dimmer outputs to 16 relay outputs.

Application:	Transforming dimmer outputs to relay outputs	
Characteristics:	Transforms 16 analog outputs of a central unit, to 2x8 relay outputs for OUR08x relay modules. !!! The transformed relays can not be defined as motor relays.	
Settings:	Through PROSOFT (add DIMTOR to the dimmer outputs).	
Installation:	Monting on DIN-rail. Connect with the dimmer output board Connect with 2x relay modules OUT08x	
Connections:	Inputs:	Connect the screw terminals of the dimmer outputs, including the 0V connection, to the screw terminals of the DIM-TO-R module.
	Outputs:	Connect one or two Sub-D connectors with the special TDS9010x cable to one or two OUT08Rx modules (look for TDS13100 , 13110, 13120, 13130)
	Power Supply:	MICROS: Take 0 V and 12 V (black and red wire) from the AUTOBUS connector. COMPACT: Take 0 V and 12 V from the power supply connector on the interface board on the bottom of the housing. PROJECT: Take 0 V and 12 V from the power supply connector on the evolved analog output board
Dimensions:	Dimensions	Length: 100; Width: 85; Height: 45 (in mm)
	Weight	0,220 kg
Schematic Drawing:
