ATMOS APP FOR MOBILE DEVICES AND PC

Whether you are at home, around the corner or anywhere on the globe, you can monitor and control your home or project instantly from your mobile devices. This application supports devices with iOS, Android and Windows OS.

If you have the ATMOS app with you, your home is at your fingertips. Forgot your keys inside the house? Check the drive way camera from your office? Open the gate or a door from your mobile, only a few clicks are needed to take action via 4G, 5G or Wi-Fi. Your family members can also have ATMOS on their smart phones and have full or limited control. The children can open the gate and entrance door from their smart phones. No more doubts about leaving your house with an insecure feeling. You can check and control even when you are far away. The live connection to your camera(s) is a real bonus, but you also have control over energy management and comfort regulation. All together, ATMOS will bring you peace of mind in one app.

This app offers you a detailed and easy to use on-screen menu system on which you can control and manage all functions of your fully integrated installation. Just activate click a room and the device you want to control, and you can alter its function. A single light, a range of lights, the heating/cooling settings in all the different zones... through the safe TELETASK Cloud connection, you can use the ATMOS from anywhere in the world.

Open a gate or door, control a light, set the temperature, activate the garden sprinklers in your holiday house, check if the children or cleaning lady have switched off all energy consuming items when they left, etc. The TELETASK ATMOS app always gives you instant feedback. See the status of lights, gates, temperatures, wall sockets, audio/video equipment and much more. Have a detailed look on all available IP camera's in and around your house or company building. You can also check energy parameters like consumption, generation, EV charging control, ... More functions will be added in the future. Thanks to the renewable subscription, new ATMOS features are added on a regularly basis.

If you are at home, you don't always need a 4G/5G/Wi-Fi internet connection. A local Wi-Fi connection is sufficient. So at home, the ATMOS can be used as an intelligent remote control, which can be used for your multi-room audio system, to control all lights, to open a door or gate, to control curtains, shades, garden sprinklers, camera's, etc... Anything, anytime in only one app!

Together with your TELETASK system, the ATMOS app offers you comfort, security and the best of energy management.

ATMOS can be installed via the Apple/Android stores and you can even start a free demo version immediately. In the ATMOS app there are several settings you can change. Set your preferred colour theme, room name sorting, put favourites on the dashboard and sort them to your needs, etc...

AT HOME

Using the internet, the TELETASK system in your house maintains a permanent connection to the TELETASK Cloud service. Your devices will connect to it automatically and stay connected also with your ATMOS app.
