TELETASK
trendsetter in domotics

DOMUS DEMO CASE
ALL-IN-ONE SOLUTION FOR A PERFECT TRAINING, TEST AND DEMONSTRATION

If you are looking for the perfect training and demonstration solution, check out this multi-functional DOMUS Demo Case. Besides all basic home automation features, this robust and compact unit is provided with several state-of-the-art capabilities.

If you want to train yourself or your integration team in the world of TELETASK products, just plug the mains cord of this demo tool and you can start. If you want to convince a customer of the features and flexibilities of the TELETASK solutions, just put your demo case at the back of your car or overhead bin and bring a TELETASK home to your customer. Giving a full demo, will save you a lot of precious time. Instead of explaining for hours, a ten-minute demo with this tool will be more credible.

CONTENT
The beating heart in this demo case is the extreme compact DOMUS central unit, with all DoIP* functions on board.
The demo case contains a basic TELETASK installation which can be used for beginning and advanced training of TELETASK system integrators:

The drawing of a house with all necessary features and several push buttons and feedback LED's.

MORE

The simulated house provided of LED's and small push buttons gives a simple, fast and correct image of a number of smart home aspects, such as lighting (switching and dimming), shutters/curtains/sun blinds, heating/cooling, etc... On this interactive panel, the integrator can check and optimize his PROSOFT configuration files. Most of the TELETASK functions can be trained and demonstrated. This demo case can be extended with any TELETASK interface by using the AUTOBUS connection on the DOMUS central unit. On top of this, the built-in LAN provides unbeatable connection features and wireless smart phone demo.

This demo case also contains an AURUS-2 SENSE and AURUS-OLED touch panel. Besides messages and alarms, you can display the values of the built-in temperature- and light sensors.

This TDS56409G3G3 demo case is also provided with state-of-the-art features which enhances its commercial value. Thanks to the built-in Wi-Fi router you can give a Wi-Fi communication demo at customers site (4G also possible with SIM card). You will like the wireless configuration and the extended demonstration possibilities of the iSGUI. The included GUI+ license is suitable for remote control from your Windows PC. Both on iSGUI and GUI+ you can also demonstrate the IP camera integration.

If you want to give a voice control demonstration, you can buy the VOICE CONTROL subscription (TSF16120), connect an Amazon Alexa or Google Home voice assistant to complete it.

*DoIP: Domotics over IP
